```java
package com.spring.core.autowiring;

public class Student {
    private Address address;

    public Student() {

    }

    public Student(Address address) {
        super();
        this.address = address;
        System.out.println("Inside Constructor");
    }

    public Address getAddress() {
        return address;
    }

    public void setAddress(Address address) {
        System.out.println("Setter Injection");
        this.address = address;
    }

    @Override
    public String toString() {
        return "Student [address=" + address + "]";
    }

}
```
