```java
package com.spring.core.javaconfig;

import org.springframework.stereotype.Component;

//@Component // If removed, need to define same in AppConfig.
public class Student {

    private Address address;

    public Student(Address address) {
        super();
        this.address = address;
    }

    public Address getAddress() {
        return address;
    }

    public void setAddress(Address address) {
        this.address = address;
    }

    public void study() {
        System.out.println("Student is studying...");
    }

    @Override
    public String toString() {
        return "Student [address=" + address + "]";
    }

```

```
00034: }
```
